FULL-STACK DEVELOPMENT / FRONT-END & BACK-END / PYTHON & JAVA

Full-stack software developer and recent Computer Science honours graduate from York University, building and shipping complete web and mobile applications across the front-end and back-end. Built and deployed a Spring Boot and PostgreSQL e-commerce platform and a React Native expense-splitting app, each earning a perfect project grade, and delivered production automation tools during a Toronto Transit Commission co-op that replaced slow legacy workflows. Comfortable with Python, Java, JavaScript, and SQL, with hands-on React, Node.js, REST API, Git, and Docker experience, and ready to contribute to a software development team from day one.

CORE COMPETENCIES

- Full-Stack Development
- Front-End Development
- Back-End Development
- RESTful API Design
- Relational Databases (SQL)
- Python Development
- Version Control (Git)
- Docker & Deployment
- Debugging & Troubleshooting

PROFESSIONAL EXPERIENCE

Robotics & Coding Instructor | [Vertex STEM Education](#) | Toronto, ON **August 2026 – Present**

Teaches coding and robotics to students aged 6 to 13 in an in-person program, delivering hands-on Java and Python lessons that span core fundamentals through object-oriented programming and game development, and developing original lesson plans while reviewing those of other instructors.

Freelance Python Tutor | [Preply](#) | North York, ON **July 2026 – Present**

Provides one-on-one online Python tutoring to university students, guiding a University of Toronto learner through final-exam preparation on object-oriented programming, dictionaries, lists, and loops across 13 one-on-one sessions, earning a five-star review for making complex Python problems clear.

Programmer & Analyst Co-Op | [Toronto Transit Commission](#) | Toronto, ON **May 2025 – August 2025**

Delivered four to five software projects during a summer co-op, building internal tools and databases for operations staff, some independently and some paired with another co-op student. Gathered requirements with the reporting manager and presented completed work through in-person code reviews.

Selected Accomplishments:

- **Workflow Automation:** Automated the employee-database update with SQL and VBA, turning a multi-hour weekly task into a two-button operation that saved time and reduced manual entry errors across hundreds of records.
- **Legacy System Modernization:** Rebuilt slow Microsoft Access forms and reports in HTML, CSS, and JavaScript, cutting load times from up to 55 minutes to one or two minutes for the staff who used them daily.
- **Operations Calendar Tool:** Engineered a calendar application in HTML, CSS, and JavaScript that surfaced daily train service data by day, peak, and line, replacing a manual paper process with instant self-serve lookups for operations staff.
- **Database Maintenance System:** Built a maintenance-scheduling system and database that let administrators set timed maintenance windows with automatic notifications, giving staff advance warning to save open work before each scheduled maintenance window.

Research Assistant, Machine Learning | [York University](#) | North York, ON **May 2024 – August 2024**

Collaborated with a professor to build a machine-learning model in Python that classifies emotions in conversational text, supporting a research paper. Self-directed the initial learning curve, then trained and evaluated the model from the ground up.

Selected Accomplishments:

- **Model Development:** Built and fine-tuned a GPT-2 model on the DailyDialog dataset in Python, handling data preprocessing, tokenization, and a labeled text-classification task to predict emotions such as happy, sad, and angry.
- **Evaluation & Iteration:** Assessed model performance through structured test cases and classification accuracy, logging results and iterating on the model to reach reliable emotion prediction across conversational samples.

KEY PROJECTS

Kuik - Full-Stack E-Commerce Platform

September 2025 – December 2025

- **Back-End & Deployment:** Built the Spring Boot and Java back-end in MVC architecture, exposing REST endpoints for authentication, product management, cart, and order processing, then containerizing it with Docker and deploying to production on Render.
- **Data Integrity & Security:** Designed a normalized PostgreSQL schema with enum-based order states and stock-safe checkout logic, and protected account and payment information through hashing.
- **Front-End Integration:** Contributed React and website-design work alongside the back-end, integrating the front-end with the API for secure end-to-end communication, on a four-person project graded 100 percent.

Sharelyst - Full-Stack Mobile App

September 2025 – November 2025

- **Front-End Development:** Built the React Native (Expo) front-end for a group expense-splitting app, with an intuitive UI and responsive navigation, over a Node.js and Express back-end with SQLite, JWT authentication, and RESTful routes.
- **User Testing & Deployment:** Led hands-on user testing with real testers, timing core tasks and folding feedback into UI improvements, then containerized and deployed the full stack on Render, on a four-person project graded 100 percent.

AI Navigator - AI News Aggregator (Personal Project)

December 2025 – January 2026

- **Python & GenAI Pipeline:** Built a personal AI news aggregator in Python that pulls from RSS feeds and YouTube, uses LLM-powered summarization to condense articles, and ranks content by user interest into a personalized email digest.
- **Automated Deployment:** Structured the project with a modular back-end of scrapers and processing services, orchestrated daily automated runs, and deployed it as a containerized system with Docker on Render.

ADDITIONAL NOTEWORTHY EXPERIENCE

Soccer Head Coach | [Thornhill Soccer Club](#) | Thornhill, ON

May 2023 – October 2025

Graphic Designer | [Toronto Transit Commission](#) | Toronto, ON

May 2023 – August 2023

Sports Attendant | [Vaughan Community Centre](#) | Vaughan, ON

April 2022 – June 2025

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Science (Honours), Computer Science | [York University, Lassonde School of Engineering](#)
North York, ON | April 2026

Relevant Coursework: Advanced Data Structures, Advanced Object-Oriented Programming, Advanced Software Engineering, Software Design, Building E-Commerce Systems, Operating Systems, Computer Security

Awards & Competitions: People's Choice Award and Top 8 of 250 teams, UNHack Hackathon (Lassonde School of Engineering, 2023) | 1st Place at York University, ICCP Regional Coding Competition

Professional Development: The Hour of Code (CodeAI, 2021) | Hands-on Hardware 101 (LogicFusion Tech, 2018)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C/C++, SQL, Bash, HTML, CSS

Frameworks & Libraries: React.js, React Native, Next.js, Node.js, Express.js, Spring Boot, OpenCV

Databases: PostgreSQL, MySQL, SQLite, MongoDB, Microsoft Access

Cloud & DevOps: Docker, Render

Tools: Git, GitHub, Postman, Visual Studio Code, Android Studio, Figma, Colab

Platforms: Linux (Ubuntu), Android, Jupyter Notebook
